ETHAN JUSTICE

Cloud Security Analyst | Cloud Governance, Risk and Compliance (GRC) | Security Automation

Chicago area | Justice.ethan04@gmail.com | ethanjustice.pages.dev | linkedin.com/in/justice-ethan | github.com/Tsuji-Hub

SUMMARY

Cloud Security Analyst at a Fortune 500 insurer working across cloud governance and security operations on Google Cloud Platform (GCP). Brought 1,100+ GCP projects under CMDB governance, cut weekly security metrics reporting from hours to minutes, and led a no-code SOAR proof of concept. Off the clock: a homelab whose security controls I attack from outside and fix where they fail, and a fix merged into a 13.7k-star open-source project.

EXPERIENCE

A Fortune 500 insurer

Cloud Security Analyst Apr 2026 - Present

- Led a proof of concept of no-code Security Orchestration, Automation and Response (SOAR) platforms (Torq, Tines): built workflows that auto-enrich cloud vulnerability alerts; demoed to leadership with an adoption roadmap.
- Integrated Wiz Cloud Security Posture Management (CSPM) findings with ServiceNow so incident tickets arrive pre-filled with asset ownership and context.
- Facilitate annual cloud control reviews; governance docs stay audit-ready via CI/CD-driven updates.
- Assisted remediation management when unapproved pre-hardened Docker images were found heading toward production; handled the remediation ticket through to completion.

IT Security Rotational Program Jun 2024 - Apr 2026

- Validated metadata for 1,100+ GCP projects and linked each to its business application in the ServiceNow Configuration Management Database (CMDB); created 8 Technical Service entries to establish ownership.
- Defined the container security operating model: a RACI matrix across 46 controls, agreed with Cloud Engineering, Networking, and AppSec.
- Shifted misconfiguration handling from reactive fixes to prevention by recommending GCP Organization Policy constraints that block risky configurations at the source.
- Co-built the ServiceNow intake process for cloud security requests and routed Wiz CSPM findings into vulnerability ticketing for tracked remediation.
- Automated weekly security metrics reporting with scripts and macros, cutting a multi-hour manual process to minutes.
- First rotation (8 months): security risk remediation and issue tracking in ServiceNow GRC.

Security Advisor Intern Jun 2023 - Aug 2023

- Ran browser extension governance with Active Directory; risk exception process in ServiceNow and ZenGRC.

PROJECTS

Homelab, Proxmox VE run like production: 31 containers on 7 guests. Attacked every edge control from outside; testing caught 4 controls not doing their job (fail2ban never enforcing, IPv6 skipping the admin allowlist, HTTP/3 skipping the geo filter, credentials in proxy logs), all fixed and re-tested. OWASP CRS WAF (blocking), CrowdSec, Wazuh SIEM, default-deny nftables, restore-tested backups.

Atlas & Jarvis, self-hosted voice assistants with a trust boundary: Jarvis, a public Discord voice bot (Whisper, Gemini, Kokoro on a local GPU), holds no Home Assistant or media-request credential and checks Discord permissions in code before any moderation tool runs. Atlas pushes homelab alerts with signed restart actions.

Makimono, Android manga reader (Kotlin): fork of the open-source Mihon app, 21 releases with signed in-app updates; recommendations ranked by agreement across 5 sources; drop rates backed by my own statistics service (peer baselines, Poisson-tested cliffs).

Mealie, open-source recipe manager (13.7k stars): fix merged upstream in v3.27.0 with a first-contributor credit. My fork's runtime image went from 147 to 100 Python packages, and I found and fixed disabled TLS verification in its scraper code.

COMPETITIONS

Department of Energy CyberForce: 5th of 160 teams (2022), 10th (2023). Lewis Cyber Flyer CTF: 1st place (2021). National Collegiate Cyber Defense Competition (CCDC) competitor. Tools: Splunk, Snort, Sysmon, OpenVAS, Nmap.

SKILLS

Cloud: Google Cloud Platform (GCP), IAM, Organization Policy; AWS (working knowledge)
Security tooling: Wiz (CSPM), Torq, Tines (SOAR), AquaSec, Splunk, ServiceNow, ZenGRC, Wazuh, CrowdSec, OWASP CRS, Trivy
Systems and code: Linux, Docker, ZFS, nftables, systemd, Active Directory, Python, Kotlin, Bash, SQL
Practice areas: cloud governance, container security, vulnerability management, audit readiness, NIST CSF

EDUCATION & CERTIFICATIONS

M.S. Cybersecurity, 2025 (GPA 3.9) and B.S. Cybersecurity, 2024 (GPA 3.8, Dean's List), Lewis University 4+1.
Google Cloud Digital Leader | ISC2 Certified in Cybersecurity (CC) | Torq Automation Practitioner | PADI scuba certification
